

Pre-push QA: Accept

Measured Trust / trained Splink redesign

Referee 2 code audit · 1 August 2026

A clean rebuild passes every executable gate

Gate	Result
Python tests	407 passed
dbt tests	27 passed
DQA detection	90.75%
Ruff lint + format	PASS
Privacy scan	PASS
Deck/card compile warnings	0

Independent SQL reproduces the linkage scorecard

	True	False	Recall	F1
Exact rules	556	0	0.631818	0.774373
Trained Splink	812	0	0.922727	0.959811

Agreement tolerance: 10^{-12} across all operating metrics.

The production path is trained Splink—not a hybrid shortcut

Train globally → persist JSON → fresh load → infer

Exact rules are a benchmark only. Accepted production links come from Splink, then pass mutual-best, one-to-one, and ambiguity safeguards.

No major concern remains before push

- ▶ Clean-room pipeline rebuild completed.
- ▶ CI formatting drift and a guaranteed-red prose gate were corrected.
- ▶ The DQA regression floor was restored to 90%.
- ▶ Synthetic calibration and seven unresolved transfers remain disclosed.

Verdict: Accept
